

HUNTER
MARINE CORPORATION
AN EMPLOYEE OWNERSHIP COMPANY

June 1, 2007

SB# 01-D, I

Dear H45CC Owner (Hull Numbers covered by this Bulletin are HUN4C101F506 through HUN4C170C708).

It has come to our attention at Hunter Marine that we committed an error in wiring the engine start panel installed on your boat. It is our opinion that this wiring error does not cause any safety concern, but will lead to a premature drainage of your boat's main batteries under certain conditions.

We are making arrangements through our dealer network for this wiring correction to be made at our expense. We were able to simulate this inspection and repair in less than 30 minutes at the Hunter Marine factory. We have attached two drawings, which show both the correct and incorrect wiring schematic of the engine start panel. If your engine start panel does not match the correct wiring then the correction needs to be completed before your boats next use. Without the correction, your boat's main batteries are subject to drainage, leaving them in a condition that will not allow for the starting of the main drive engine or optional generator. Failure to complete the corrections where it is required, will lead ultimately to the drainage of the batteries and perhaps even premature damage to the batteries themselves.

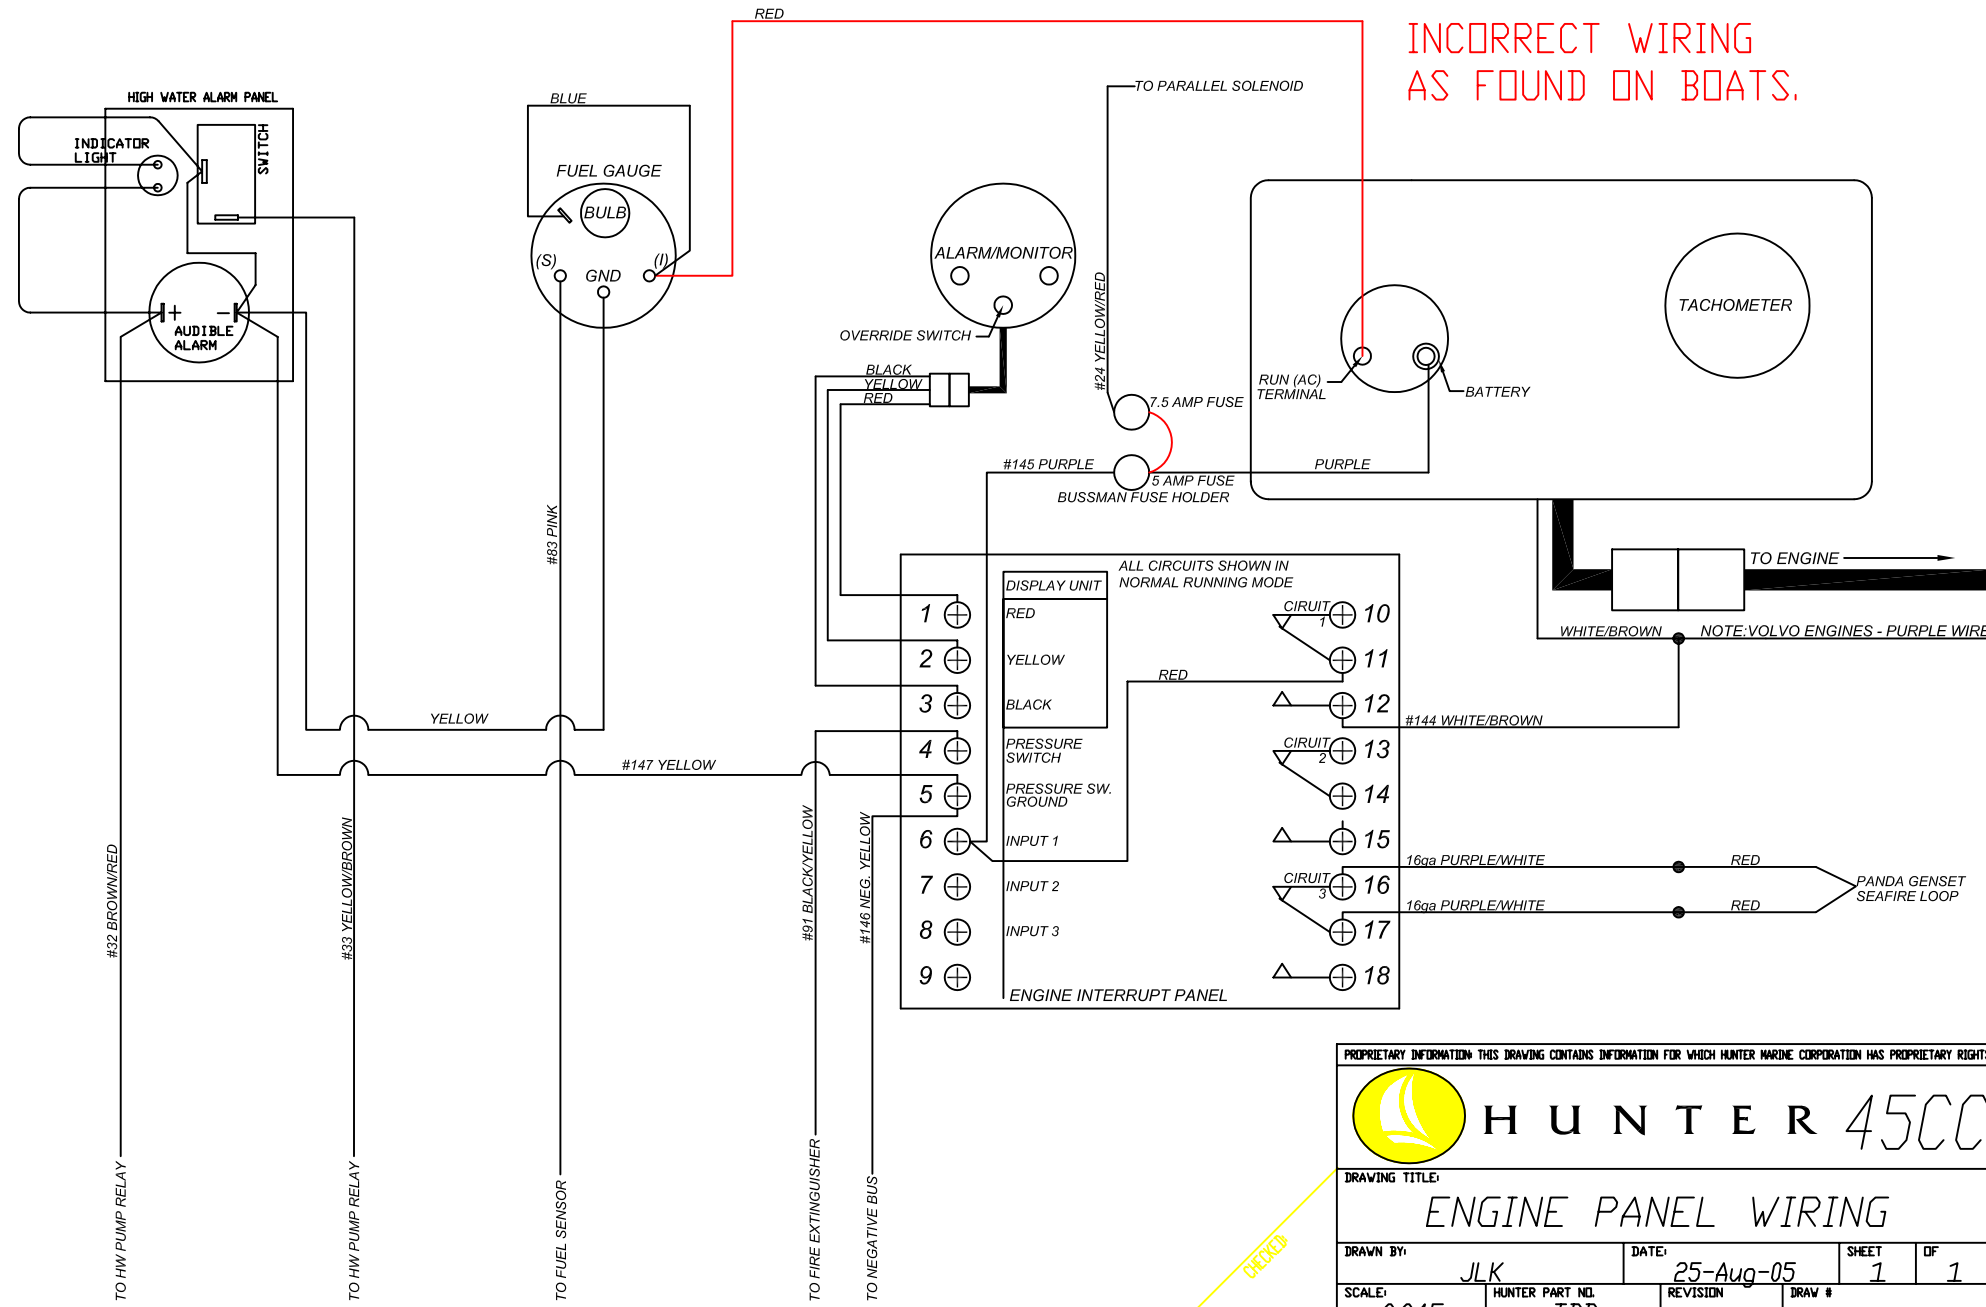

In the meantime, Hunter Marine recommends the monitoring of your boats batteries' condition by using the main D/C distribution panel until the inspection and the correction has been completed.

If you have any questions or concerns regarding this Service Bulletin or if you need assistance in making arrangements for the inspection and/or correction, please feel free to contact our Customer Service Department of Hunter Marine at 800-771-5556, 386-462-3077 by fax to 386-462-2862 or by email to < Customerservice@huntermarine.com > where we will assist you in locating a Hunter Marine dealer or repair facility.

Thank you

The Customer Service Department
